R Practice/Brush Up #18

General

Hi! Does anyone have any resources they can recommend for brushing up/reviewing R?

I would look at this bookdown. It's basically coding in R that follows along with the book.

I'm not sure how helpful this is, but I save all my assignments from previous classes and typically review and copy code from them. Since R is relatively new, if you're ever having trouble with a function or how to do something, the instructions/troubleshooting are often available online (StackExchange, blogs, etc.). My first class using R was STAT 308 and most of it until the project was basic, and I anticipate the same initially for this class. I would try experimenting with some of the functions in base R (c, read.table/data.frame, mean/sd/var, pnorm/pbinom, set.seed/sample, as.numeric/as.vector, rep/seq, etc.) because it's actually quite robust. Side note, always make sure your R, RStudio, and packages are updated.
