Final

Do we need to print every step of the model selection or just the final model? I was just wondering because the output takes up ~60% of the document.

Yeah comment out the work or don't print it out as a summary. Just run the final model with output. I don't want to be scrolling forever.

The summary output of one of my important models is absurdly long because of the correlation structure - I already submitted and don't really have time to mess around with it tomorrow so I guess this is just a heads up. Sorry!
