⤴ Question about HW 5 Problem 20b

2

Apr 17th, 7:31 am

Rob Hand

Thank you

Apr 17th, 8:44 am

Rob Hand

One more question about this: I don't think we can do problem 21 with the one factor models, because it is asking for a varimax rotation, and it doesn't seem like you can "rotate" a single factor model (the varimax function gives me an error which I think is saying this: "Error in if (nc < 2) return(x) : argument is of length zero") I believe maybe because a rotation wouldn't apply since we only have one dimension?

Apr 17th, 11:17 am

@Rob Hand I ran into the same thing. For that, I did a rotation on the $m = 2$ model from 9.20(a) only.
